- Designs and builds web pages using a variety of graphics software applications, techniques, and tools.
- Development of website backends by using PHP, including WordPress taxonomies, custom fields, customized database configuration, and external APIs
- Perform website, plugin and security maintenance and updates

## PERSONAL PROJECTS

### FeedMe

- FeedMe is a web application that is fun and simple tool for generating random meal ideas when users are looking for culinary inspiration or simply want to try something new for their next meal. The app uses React.js to design and organize the front end and uses JSON to store data.

*Technologies: React.js | JSON*
